The amendment dated 12/21/05 has been considered with the following results:

Original Patent

1. The original patent, or a statement as to loss or inaccessibility of the original patent, must be received before this reissue application can be allowed. See 37 CFR 1.178.

Claim Objection

2. Claim 32 is objected as being dependent on a cancelled claim 13.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 17, 21 and 33-36 are rejected under 35 U.S.C. 102(e) as being anticipated by Valent (US 5,867,353).

Valent, according to Figs. 1 and 3-5, shows a disk drive and a disk comprising all the features of the instant claimed invention as interpreted as follow:

Regarding claim 17, see Figs. 1, 3 and 5 of Valent which show a disk drive (see Fig. 1) comprising: a spin motor (14); an actuator arm (22, 24); a head (20) having a read element and write element coupled to the actuator arm; a disk (12) attached to the spin motor (14) having a plurality of tracks each of which has a track centerline CL and the tracks including a dedicated

track having stored thereon one or more system parameter (50-60) aligned with the centerline (CL) of the dedicated track (see Fig. 5); and a servo controller (circuits 30) configured to initially move the head to the dedicated track upon powering up of the hard disk drive and to read the system parameters while the read element is centered along the centerline of the dedicated track (see column 4, lines 8-23)

Regarding claims 21, see Figs. 1-5 of Valent which show a disk drive (see Fig. 1) comprising having a head (20) containing a read element and write element; and in operation, after powering up the disk drive; the head is initially aligned with a centerline of a dedicated track that contains at least one system parameter; and the system parameter on the dedicated track is read by the head as recited in this claim (see column 4, lines 8-23)

Regarding claims 33-34, see column 3, lines 32-67.

Regarding claim 35, see Figs. 1-5 of Valent which shows a hard disk drive (see Fig. 1) having a head (20) contains a read element (44) and a write element (46), and wherein upon power up of the disk drive, the read element (44) is aligned with the centerline of the dedicated track and the system parameters (50-60) are read from the dedicated track while the read element (44) is aligned with the centerline of the dedicated track (see column 4, lines 8-23).

Regarding claim 36, see column 3, lines 32-67.

Allowable Subject Matter

5. Claims 1-12 are allowed over the prior art of record because the prior art of record

Response to Arguments

6. In response to Applicant arguments, Applicant's attention is drawn to column 4, lines 8-23 of Valent which discloses after each power on of the drive, the head is moved and centered on

a centerline of a dedicated track thereby to read a system parameter (calibration bits) as now recited in claim 17,21 and 33-36.
